

**REMARKS**

In the parent application, a typographical error was corrected at page 6, line 16, changing "PET film 102" to --PET film 101--.

Further, the specification of the parent application was amended to correct a minor informality. Specifically, B<sub>2</sub>H<sub>6</sub> is mentioned as an n-type impurity gas in the specification on page 7, line 30, page 10, line 13, and page 11, line 15. This portion of the specification has been amended to change B<sub>2</sub>H<sub>6</sub>/SiH<sub>4</sub> to "PH<sub>3</sub>/SiH<sub>4</sub>." As accepted in the parent application, it is respectfully submitted that one of ordinary skill in the art would readily recognize that boron (B) is a p-type impurity and phosphorous (P) is an n-type. Also, phosphine gas (PH<sub>3</sub>) is generally used as the n-type impurity gas. Thus, the foregoing amendment is believed to be proper and does not add new matter.

Respectfully submitted,

  
Eric J. Robinson
